

# MIC AND B12 INJECTIONS

*Let's talk about it.*

## MIC INJECTIONS

Benefits of MIC injections

- Improve mental function
- Improve mood and clarity
- Assist detoxification reactions in the liver
- Aid in metabolism of fats
- Eliminate toxins
- Boost energy
- Prevent excess fat in the body
- Preservation of lean muscle tissue
- Lowers blood cholesterol

## B12 INJECTIONS

Benefits of B12 injections

- Boosts energy
- Assists in turning fat into energy
- Promotes healthy blood cell formation
- Enhance and stimulate nerve cell growth
- B12 injections are given in the office and typically covered by insurance

## What are MIC injections?

MIC injections are a powerful combination of enzymes and amino acids specially formulated as a weight loss product by boosting your metabolism, increasing your body's fat-burning mechanisms and provide you with the energy you need to lose weight fast. It is made up of numerous lipotropic compounds that help catalyze the breakdown of fat during metabolism in the body. Methionine, Inositol and Choline are the major components of this lipotropic shot. When administered together with a low-calorie diet and exercise this can produce outstanding results.

## How do they promote weight loss?

The liver performs many functions in the body especially detoxification and metabolism. When you begin using MIC shots, they enhance the liver's ability to perform its functions better and more efficiently. This is achieved by helping catalyze the breakdown of fats during metabolism in the body thus preventing the abnormal build up of fats in the liver. At the same time boosting your body's energy providing a temporary but highly effective increase in metabolic rates and processes in your body. MIC injections can help you increase your energy level via the fat release and the energy promoting properties of L-Methionine, Inositol and Choline enzymes.

## L-Methionine

Helps boost your immune system by increasing the levels of other amino acids such as glutathione, homocysteine and taurine, which all play important roles in immune functions. In addition, selenium and zinc cannot be absorbed by the body without the aid of L-Methionine. It also improves athletic performance in some because of its effect in bone volume, bone mineralization, and bone mineral content. This amino acid happens to be a critical component in the production of many other things, including creatine improving muscle to fat ratio and can help people lose weight. By injecting Methionine in to your muscles, you can quick reach high concentrations which effectively results immobilization and elimination of abnormal fatty deposits.

## Choline

Is a water-soluble nutrient related to the B vitamin family, and it's crucial for both brain and body. It is the precursor of acetylcholine, the neurotransmitter found in all motor and brain neurons necessary for muscle contraction, memory, and cognition processing and excretion of chemical waste products within the body since it is an essential substance for bile production. Without choline, fats are trapped in the liver, where they can halt normal metabolic functions. It supports the health of the liver in its protons. Moreover, it is required for the transport and metabolism of fats and cholesterol within the body, which is important for the healthy support of the endocrine, cardiovascular and hepatic systems.

## B12 injections

Vitamin B12 helps in the growth of healthy blood cells, nerve cells, and the synthesis of proteins in the body. It also helps with the metabolism of fats and carbohydrates and serves as an energy booster. Vitamin B12 participates in the conversion of carbohydrates, fats and proteins into energy.
